

Patented Paperless Circular Chart Recording Software

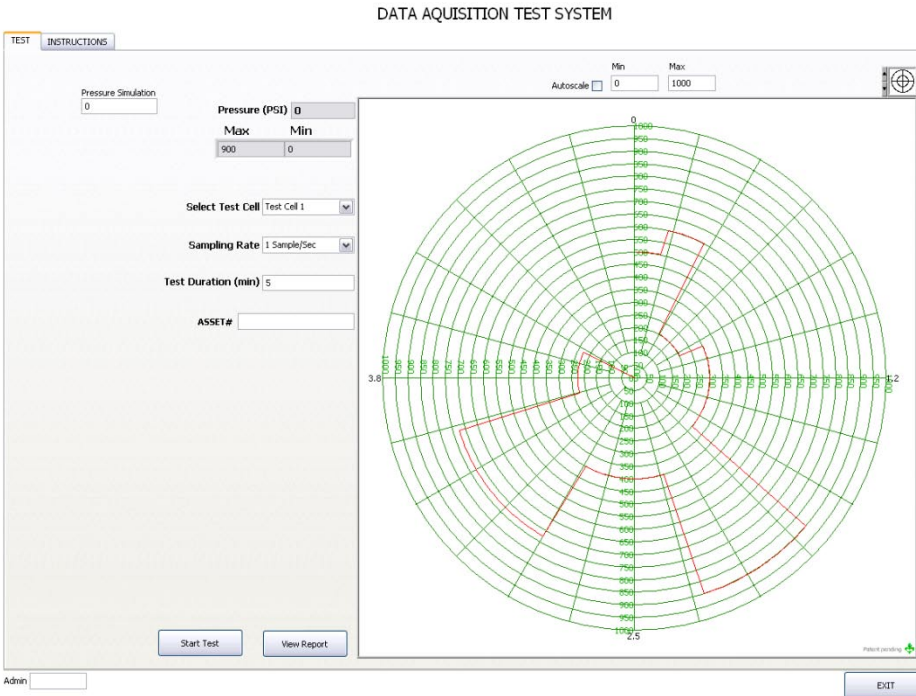

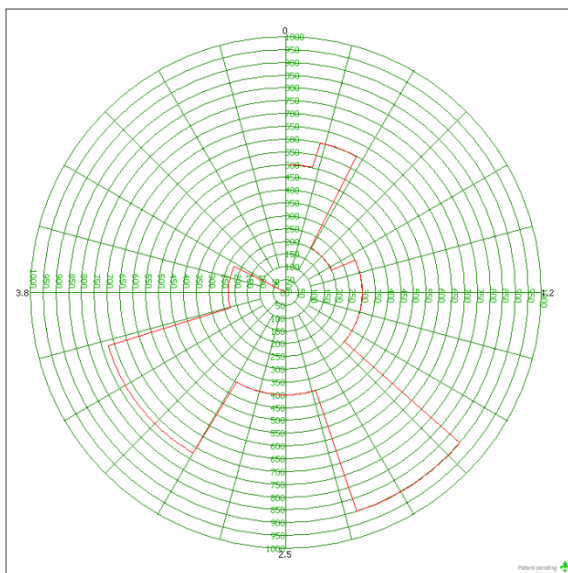

Chart Recording made easy with our patented paperless chart recording software producing the look of industry standard charts. Charts are produced in a secure .PDF format or in a Word or Excel document that can be printed or sent electronically. By using the Chart recorder control screen (left), fully automated or manual chart setup is possible. Auto or manual scaling, multiple pens, sample rates, zone zooming, and time range are just a few of the options available.

The Circular Chart data (bottom left) can be brought into the software through customers' existing electronics or the hardware necessary to achieve this can be purchased and installed by API Control System Solutions. Routine calibration is all that is necessary to keep the system operating accurately. All company forms for testing (bottom right) can be fully integrated with the Chart Recording software to fit into your company's testing procedures.
